

Nami Grant Radar Quick Start

Revision date: 2026-09-12. Application version: 1.0.1.

Use Grant Radar to decide what deserves verification and attention before a lead enters grant management. It does not establish eligibility, submit applications, or confirm awards.

1. Complete or skip first-time onboarding. Reopen it from Help.
2. Start with Home. Check approaching deadlines, verification gaps, promising signals, and Search health.
3. Open an opportunity. Confirm whether it is a REAL PUBLIC LEAD or FICTIONAL SAMPLE.
4. Open the official source. Treat CURRENT as a check date, not proof of eligibility.
5. Review why it may fit, unanswered questions, and disqualifiers. Confirm the deadline and time zone.
6. Edit the record to assign an owner, status, notes, and next action. Changes stay in this browser.
7. Use Record source check after reviewing the funder page. Changed deadline and funding fields are flagged without overwriting staff notes.
8. Use Search profile for browser-local research preferences. They are not organization facts or permissions.
9. From Exports, choose public leads or fictional samples separately and download schema-version-2 JSON and manually import it into the Grant Dashboard. A lead remains an opportunity, not an award.
10. Weekly automation is not running and requires agency configuration.

Safety: the initial Site is owner-private, but browser-local storage is not an agency database, permission system, or backup. Do not enter confidential or production information.
